EXPERIENCE

Tencent Technology Inc., Beijing, China

RS Research Intern

Oct - Dec 2020

- Assist with the unified architecture w.r.t. the *Rerank* Module for Tencent Video Recommendation System (RS).
- Conducted research on the Dynamic Graph Convolutional Neural Networks (DGCN) Survey and learned Reinforcement Learning models.

Philips Research, Shanghai, China

NLP Research Intern

Jul - Oct 2020

- Medical Concept Mapping: three levels \rightarrow BPE and FMM & BMM Algorithms for Sub-words (Syntax-level), Word Vector Cosine Similarity (Semantics-level), and Knowledge Graph (Pragmatics-level).
- Medical NER: compared the performances of different models \rightarrow CRF++, Character-level BiLSTM + CRF, Character-level BiLSTM + Word-level BiLSTM / CNNs + CRF, and deployed the models using Flask and Docker as web apps. Codes are available here, and the Docker Images are available on Docker Hub.
- Dynamic Webs Crawling: learned and crawled 620,000 words from NSTL using Python parallel package threading and other tricks to prevent Anti-reptile.

Tsinghua University, Beijing, China

NLP Summer Intern

Jun - Aug 2019

- Natural Language Processing (NLP) Intern at State Key Laboratory of Intelligent Technology and Systems, Tsinghua University, China.
- I was in a team that was responsible for building a salesman training system, which was a piece of insurance dialogue systems. During intern, I led the effort to create a Chinese Chat Title Named Entity Recognition (NER) via the BERT-BiLSTM-CRF model, and then matched the formal name with the recognized title through rules.
NER Dataset: 30,676 samples, 96.73% accuracy on 550 samples.
- I also assisted in testing the sales training review system, and integrated salesman's dialogue according to different difficulty levels, in verifying the reliability of the system.

Shipwreck Sonar Image Segmentation based on Entropy Method [Code] Jun - Sep 2018

- Pre-processed sonar images to enhance the contrast between the hull and reverberation area, which consists of discrete cosine filtering (DCT)→edge detection (Roberts Operator)→threshold segmentation via a one-dimensional histogram to locate the ship→morphological expansion by tapered concentric rings through Matlab.
- The proposed method improved segmentation accuracy (86%+) compared with that without the pre-processed stage (no more than 80%) on dozens of sonar images.

Third China Data Mining Competition, Butterfly Recognition [Website] [Code] Oct 2017 - May 2018

- Successfully implemented YOLO-V2 and Faster-RCNN object detection algorithms under Windows & Ubuntu OS using the official butterfly dataset.
- Used affine transformation, noise addition, contrast enhancement, rotation, symmetry changing, and other methods to extend the dataset.
- YOLO-V2 Results (Team A106): 71.42% Averaged IoU, and unsatisfactory classification accuracy.
