EXPERIENCE

City University of Hong Kong, China **Part-time Research Assistant** Sep 2021 - April 2022

- Investigated the topic of Deep Learning models compression and lightweight, and the deployment on mobile devices.
- Funded by my mentor (Dr. Shiqi Wang) to cover tuition fees and living expenses in HK.

Tencent Video, Beijing, China

Recommender System Intern

Oct - Dec 2020

- Assisted with the unified architecture regarding the *Rerank* Module for Tencent Video Recommendation System.
- Conducted research on the Dynamic Graph Convolutional Neural Networks (DGCN) Survey and learned Reinforcement Learning models.

Philips Research, Shanghai, China

NLP Research Intern

Jul - Oct 2020

- Medical Concept Mapping: three levels \rightarrow BPE and FMM & BMM Algorithms for Sub-words (Syntax-level), Word Vector Cosine Similarity (Semantics-level), and Knowledge Graph (Pragmatics-level).
- Medical NER: compared the performances of different models \rightarrow CRF++, Character-level BiLSTM + CRF, Character-level BiLSTM + Word-level BiLSTM / CNNs + CRF, and deployed the models using Flask and Docker as web apps. Codes are available here and the Docker Images are available on the Docker Hub.
- Dynamic Webs Crawling: learned and crawled 620,000 words from NSTL using Python parallel package threading and other tricks to prevent Anti-reptile. (Mentor: Dr. Shuang Zhou)

Tsinghua University, Beijing, China

NLP Summer Intern

Jun - Aug 2019

- Natural Language Processing (NLP) Interned at State Key Laboratory of Intelligent Technology and Systems (Prof. Xiaoyan Zhu Team), Tsinghua University, China.
- I was in a team that was responsible for building a salesman training system, which was a piece of insurance dialogue systems. During intern, I led the effort to create a Chinese Chat Title Named Entity Recognition (NER) via the BERT-BiLSTM-CRF model, and then matched the formal name with the recognized title through rules. NER Dataset: 30,676 samples, 96.73% accuracy on 550 samples.
- I also assisted in testing the sales training review system, and integrated salesman's dialogue according to different difficulty levels, in verifying the reliability of the system.

SELECTED PROJECTS

EEG-DL: A Deep Learning library for EEG Tasks (Signals) Classification [Code] May 2020

- EEG-DL is a Deep Learning (DL) library written by TensorFlow for EEG Tasks (Signals) Classification.
- Implemented 20+ popular algorithms including DNN, CNN, RNN-based, GCN with hands-on tutorials.
- Finished writing *three papers* based on this project as shown in my *Publications*.
- Comprehensive codes for EEG signals processing and classification *research*, and got 300+ GitHub stars.

Shipwreck Sonar Image Segmentation based on Entropy Method [Code] Jun - Sep 2018

- Pre-processed sonar images to enhance the contrast between the hull and reverberation area, which consists of discrete cosine filtering (DCT) \rightarrow edge detection (Roberts Operator) \rightarrow threshold segmentation via a one-dimensional histogram to locate the ship \rightarrow morphological expansion by tapered concentric rings through Matlab.
- The proposed method improved segmentation accuracy (86%+) compared with that without the pre-processed stage (no more than 80%) on dozens of sonar images.
